ERRATA

In the abstract of the paper by D'HAUSSY, RIT and LAGRAULET, this *Bulletin*, 1958, v. 55, 1048, the first sentence of the second paragraph should be amended to read: " The authors state that the evidence leads them to believe, in the present state of our knowledge, that onchocerciasis is the cause of the lesions. [In the abstracter's opinion, there was little evidence to associate these conditions with onchocerciasis itself in the cases recorded.] "

In the account of the Sixth International Congresses on Tropical Medicine and Malaria, Lisbon, this *Bulletin*, 1959, v. 56, 249, a reference is made to the " Pahang strain of *Wuchereria malayi* (which is now regarded as a separate species, *W. pahangi*) ". This is wrong. *W. pahangi* is the name given by BUCKLEY and EDESON to a species found in a dog and a cat, and it has been differentiated from the form of *W. malayi* which occurs in man and (naturally) in cats in Malaya and which is semi-periodic in habit.

The first sentence of the abstract of the paper by MARTINEZ PALACIOS, this *Bulletin*, 1959, v. 56, 517, is incorrect and should be replaced by the following:—" Indoor sprayings were carried out by CNEP [the National Commission for the Eradication of Malaria] twice in 1957 with DDT and once early in 1958 with dieldrin in Temixco, a rice-growing area of Mexico with 822 houses. This area had been sprayed previously by other agencies annually from 1945 to 1949."
